

ABSTRACT

5 The present invention relates to recombinant bovine parainfluenza virus
 (bPIV) cDNA or RNA which may be used to express heterologous gene products in
 appropriate host cell systems and/or to rescue negative strand RNA recombinant viruses that
 express, package, and/or present the heterologous gene product. The chimeric viruses and
 expression products may advantageously be used in vaccine formulations including vaccines
10 against a broad range of pathogens and antigens.
